

**Numerical Simulation of a Long
Surface-Wave Produced Plasma Cable**

Shamim Ahmad

2004

**Chubu University
Department of Electrical and Electronic Engineering**

Contents

Chapter 1	Introduction	1
1.1	Historical background of surface-wave produced plasma	1
1.2	Low pressure and high density plasma	2
1.3	Advantages and application of surface-wave produced plasma over other sources	2
1.4	Surface-wave produced plasma (SWP) sources	5
1.5	Aim and composition of this thesis	11
	References for Chapter 1	13
Chapter 2	Proposed model and mathematical formulation by using finite element method (FEM)	15
2.1	Introduction	15
2.2	Description of the proposed model	16
2.3	Finite Element Method (FEM)	20
	2.3.1 Introduction of finite element method	20
	2.3.2 Mathematical formulation for the proposed model	21
	2.3.3 Boundary conditions	23
2.4	Discussions	25
	References for Chapter 2	26
Chapter 3	Application of perfectly matched layer (PML) absorbing boundary condition for the simulation of SWP cable	27
3.1	Introduction	27
3.2	Historical background of the PML absorbing boundary condition	28
3.3	Mathematical formulation of PML for the proposed model	29
3.4	Results and discussion	32
	3.4.1 Case for constant electron density profile	32
	3.4.2 Case for exponential gradient electron density profile along radial direction	38
	3.4.3 Case for exponential gradient electron density profile along axial direction	43
	3.4.4 Case for linearly gradient electron density profile along radial direction	49
	3.4.5 Case for linearly gradient electron density profile along axial direction	52
	3.4.6 Case for linearly gradient electron density profile along both radial and axial directions	52
	3.4.7 Effect of the width of PML	56
3.5	Conclusion	57
	References for Chapter 3	58

Chapter 4	Iterative method for the simulation of SWP cable	59
4.1	Introduction	59
4.2	Description of the employed iterative method	60
4.3	Results and discussion	62
	4.3.1 Existence of surface-wave in the iterative method	62
	4.3.2 Effect of v/ω over the field intensity	62
	4.3.3 Effect of v/ω in converging to a stable field distribution	66
	4.3.4 Effect of PML position on the calculation using iterative method	70
4.4	Conclusion	78
	References for Chapter 4	79
Chapter 5	Conclusion	80
5.1	Summary of the study	80
5.2	Scope for the future research	83
